

POLISHED CHROME/NICKEL PLUMBING FIXTURES

HOW TO CLEAN POLISHED METALS

- Fill a small bowl or bucket with warm water. Wet a microfiber cloth in the water and place a nickel-sized dollop of liquid dish detergent on the cloth.
- Rub the detergent all over the polished chrome. Let the detergent soak on any difficult dirt spots for a few minutes.
- Rinse off the polished chrome with a clean, damp cloth. Make sure to get all of the detergent residue off.
- Pour some white vinegar directly onto a clean, dry microfiber cloth. Rub it over the entire surface of the chrome. Rinse with clean water.
- Rub the polished chrome with a dry microfiber polishing cloth. This keeps water spots from forming and will make the chrome shine.
- The ideal cleaning technique is to always blot dry any water from metal surfaces. Allowing water to evaporate on metal will form water deposits. It is important to use a dabbing action to dry metal, not an abrasive or rubbing action. Cleaning with a damp sponge and buff drying should keep your product looking beautiful.

CLEANING PRODUCTS TO CONSIDER

- Clorox Disinfecting Bathroom Cleaner
- Comet Bathroom Cleaner
- Fantastik Antibacterial Heavy Duty
- Green Works All-Purpose
- Green Works Glass Cleaner
- Nature's Source All Purpose (Scrubbing Bubbles)
- Nature's Source Glass Cleaner (Windex)
- Windex Original

Do not use cleaners containing ammonia, bleach or acid.

Oil-Rubbed Bronze finish should be cleaned only with Windex Original.

Success with cleaners and procedures is dependent upon such factors as the hardness and temperature of the water, using exact measurements of ingredients, changes in cleaning formulas and the condition of the product being cleaned. Since there are variations within these factors, we cannot guarantee the effectiveness of the formulas mentioned.
